# Salt Partners move to establish an engineering office in Prague

Salt Partners Ltd., Zurich, Switzerland, are independent consultants, engineers and contractors, active in the field of salt production, processing and hypersaline biotechnology. Salt Partners' worldwide reputation is based on more than 40 years of experience gained in salt and chloralkali projects implemented worldwide. Most of these projects are based on technologies invented by Vladimir M. Sedivy, the founder of Salt Partners.

Recently, Salt Partners were awarded contracts to supply HYDROSAL salt purification plants and SOLARSAL crystallisation technology to clients in the Middle East and in Africa. In this connection, Salt Partners are moving to establish an engineering office in Prague.

The new working group will expand Salt Partners' project implementation capabilities. It will provide a range of project execution services, such as:

- Feasibility studies
- Basic and detail engineering
- Project management
- Commissioning

The office shall be staffed with chemical engineers having 5 – 10 years of experience in process development, contracting, plant engineering and project management. The staff members will receive theoretical training in Switzerland and training on-the-job at Salt Partners' construction sites.

Salt industry is conservative and slow moving. Patience, perseverance, reliability and hard work is the key to long term success in this field. Members of our team who further advance this corporate culture are rewarded with remuneration that is well above average. This opens an opportunity for successful candidates to start an outstanding international career.

100 t/h HYDROSAL-F2 salt purification plant in Spain

Salt Partners invite expressions of interest by job applicants, supported by curriculum and references.
