SALT PARTNERS

Invitation

to a presentation at the meeting of the Indian Salt Manufacturers' Association in Bharuch on 21.7.2007 at 11:00

Why not turn your salt into gold?

Future perspectives of salt business in India

Global shortage of high quality salt, caused by rapidly growing demand, environmental restrictions and destructive climatic change, offers outstanding opportunities to the Indian salt industry.

Production of vacuum salt requires thermal energy, releasing carbon dioxide. Solar saltworks are the most efficient collectors of environmental energy. Implementation of salt projects that replace vacuum salt with solar salt or reduce energy consumption in vacuum salt manufacture can earn Certified Emission Reductions (CER). The value of CER certificates may multiply many times the profitability of salt production. Salt Partners avail of experience and expertise required to establish salt projects qualifying under the CDM and JI schemes.

Advanced technologies, such as BIOSAL biological solar saltworks management, HYDROSAL salt purification process and THERMOSAL salt evaporation and crystallisation technology, facilitate profitable production of high quality salt for chloralkali industry, human consumption and exports.

Salt Partners are consultants and engineers, active in the field of salt production, processing and hypersaline biotechnology. Our reputation is based on 35 years of experience gained in projects implemented world-wide.
